What is Spare?

Spare is a new paratransit software system with modern features such as updated and precise mapping, real-time optimization, and a user-friendly platform that's easy on the eyes. Spare uses current technology to optimize the system for improved performance for our clients and the staff behind EBP.

Why are we changing systems?

Our current system, ADEPT, is outdated and no longer being supported.

What does that mean for me?

This means you will have better tools to:

- Perform pick-ups and drop-offs with ease
- Assist customers with more control
- Improve efficiency and performance
- Improve driver and dispatch communication
- Proactivity monitor and assist drivers
- Simplify daily tasks
- And much more

What will be the biggest change?

Spare Driver App:

- **No more paper manifests!** Driver will receive and perform all functions on the Spare driver app that will automatically record all necessary trip data such as pick-up time, drop-off time, and odometer.
- **No more add-on sheets!** Spare sends and records all trips and trip details to the Spare driver app.
- **Streamlines scheduling:** Spare utilizes the app location to optimize the driver's manifest to give the driver the most logical trip available.

When's the changeover?

Spare launches on **Friday, May 1st, 2026!**
